

TYLER M. PIMENTAL

DevOps / Cloud Platform Engineer • Secure Federal & Defense Environments • USMC Veteran

Battle Creek, MI (Remote) | 603-213-2711 | tylerpimental@gmail.com | www.tpimental.com

SUMMARY

DevOps and cloud platform engineer with hands-on experience designing, automating, and operating secure infrastructure across AWS GovCloud and Azure Government. Builds Terraform-based Infrastructure as Code, private Kubernetes (AKS) platforms, and GitLab/Jenkins CI/CD pipelines that turn messy infrastructure and compliance requirements into repeatable, supportable platforms. Troubleshoots across networking, identity, compute, database, and security layers, and translates NIST 800-171 / CMMC / STIG requirements into enforceable architecture. Marine Corps background: structured execution under pressure and a mission-first mindset.

TECHNICAL SKILLS

Cloud Platforms: AWS GovCloud (EC2, ALB, RDS, S3, VPC, IAM, ECS, CloudWatch, Managed AD), Azure Government (AKS, AVD, ACR, PostgreSQL Flexible Server, Azure Monitor / Log Analytics, Defender for Cloud), landing-zone & hub-spoke design

IaC & Automation: Terraform (modular repos), Ansible, Azure Image Builder / Compute Gallery, Python, Bash, PowerShell

Containers & Orchestration: Kubernetes (AKS: ingress, namespaces, RBAC, node pools), Docker, Helm-based tooling, Azure Container Registry, ECR, hardened base images, container scanning

CI/CD & GitOps: GitLab CI/CD, Jenkins, GitHub Actions, Argo CD, artifact promotion, environment-aware deployments

Networking & Security: VPC/VNet design, NSGs, UDRs, Azure Firewall, private endpoints & Private DNS, VPN access patterns, load balancing, DNS, DISA STIGs, NIST SP 800-171, CMMC L2, RMF/ATO, vulnerability management (ACAS, Defender)

Identity & Databases: Microsoft Entra ID, managed identities, Keycloak, OIDC/CAC, PKI, AWS Managed AD; PostgreSQL Flexible Server, RDS Oracle/MSSQL

Systems & Observability: RHEL, Ubuntu, Windows Server, systemd, SELinux/fapolicyd, performance tuning; Azure Monitor, CloudWatch, Uptime Kuma, log analysis, incident response

PROFESSIONAL EXPERIENCE

EXPANSIA | Remote

Dec 2023 – Present

Site Reliability Engineer / Cloud Platform Engineer

- **Platform engineering:** designed and operate secure infrastructure across Azure Government and AWS GovCloud (IL4) supporting developer workstations, PLM/enterprise applications, and DevSecOps tooling for defense customers.
- **Infrastructure as Code:** built modular Terraform repositories for AKS, AVD, PostgreSQL, networking, and image pipelines, eliminating manual deployments and configuration drift with version-controlled, peer-reviewed, reproducible environments.
- **Kubernetes / AKS:** helped design a private AKS platform (internal ingress, namespace-per-app tenancy, private ACR, Key Vault secrets, RBAC, node-pool strategy) hosting an initial application while establishing reusable patterns for future workloads; integrated platform services including Argo CD, SonarQube, Keycloak, Dependency-Track, and Uptime Kuma.
- **CI/CD:** built and maintained GitLab and Jenkins pipelines for containerized services — hardened base images, registry workflows, container scanning, and environment-specific deployments — improving delivery speed, consistency, and auditability.
- **Secure networking:** designed private-by-default access patterns using NSGs, UDRs, Azure Firewall tradeoff analysis, private endpoints/Private DNS, and VPN-only administrative access aligned to CMMC / NIST 800-171 boundary and least-privilege controls.
- **Enterprise applications:** operated AWS GovCloud hosting for Teamcenter and Ansys Granta MI — internal ALB target-group design, Keycloak/CAC/OIDC authentication, RDS Oracle configuration and auditing, AD domain join, and STIG remediation — increasing uptime and release velocity.
- **VDI & image engineering:** engineered Azure Virtual Desktop environments for developer and CAD users: Windows 11 multi-session golden images via Azure Image Builder, WSL enablement, Entra join and host-pool connectivity diagnostics, and Defender exposure remediation.
- **Compliance engineering:** partnered with cybersecurity teams to convert vulnerability findings and POA&M items into sustainable remediation — patching strategy, secure baselines, audit evidence — favoring repeatable technical patterns over one-off fixes.

Pax8 | Remote

Feb 2023 – Dec 2023

Cloud Specialist

- Led Azure environment assessments for MSP partners and translated business requirements into scoped, actionable cloud project plans and proposals.
- Streamlined pre-sales-to-delivery workflows, accelerating project timelines through concise technical scopes.

Apex Systems (Contract) | Twentynine Palms, CA

Oct 2021 – Feb 2023

System Administrator — MCAGCC Facility-Related Control Systems

- Engineered and administered a fully air-gapped Energy Management Control System domain, guiding it toward Authority to Operate (ATO) under DISA/RMF requirements.
- Implemented PKI and Active Directory for control-systems environments and maintained 300+ devices to DISA STIG and ACAS vulnerability standards.

Earlier IT Experience (2020 – 2021)

- Jacobs — PC Technician: led an annual refresh of 600+ government systems; managed SCCM-compliant endpoints supporting USMC SOCOM.
- MSA / NMCI (Contract) — Support Analyst & Field Service Rep: Tier 1–2 support, O365/VPN troubleshooting, and onboarding infrastructure during company expansion.

MILITARY EXPERIENCE

United States Marine Corps | USA

Apr 2016 – Apr 2020

Satellite Transmission Supervisor

- Supervised a tactical network operations center — monitoring satellite links, endpoints, and connections under mission-critical conditions.
- Adapted legacy equipment for new use cases, improving versatility and cost-effectiveness of deployed communications systems.

EDUCATION & CERTIFICATIONS

Bachelor of Science, Computer Science

May 2025

Active: CompTIA Security+ CE (2019 – present)

Prior: AWS Solutions Architect – Associate (2022); Microsoft Azure Administrator Associate (2023); Microsoft 365 Modern Desktop Administrator (2021); Azure Fundamentals (2020)
